

iGo

Portable oxygen concentrator

iGo

DeVilbiss Healthcare introduces the iGo portable oxygen concentrator.

Small and lightweight yet capable of delivering up to 3lpm of constant flow oxygen, the iGo provides portability without comprising oxygen performance.

An ideal choice for travelling, the iGo can be operated from a standard 12 V car charger socket or from its lithium ion battery. For long journeys the battery life can be extended up to 5.4 hours using our proven 'PulseDose' technology.

The iGo is robust, user friendly and has been designed to deal with the rigours of everyday life. The control panel is simple to use and with the exception of cleaning the gross particle filter, preventative maintenance is reduced as the iGo does not require manufacturer's servicing for the first three years.

The integrated Oxygen Sensing Device and service alerts are designed to give peace of mind that the iGo portable oxygen concentrator is delivering the right amount of oxygen to meet the patient's needs. The iGo is supplied complete with battery, AC/DC power adapters and mains lead. It can be

transported using a wheeled carry case for added portability and the new detachable accessory bag offers an additional storage option.

Main Features

- Up to 3 lpm constant flow
- 8 settings available in PulseDose mode
- Long battery life
- Oxygen Sensing Device and audible and visual alarms
- Robust design
- Wheeled carry case available
- 12 V car adapter

Transport options and accessories

- Available with two travel options:
 - 306DS-B: cart and accessory bag
 - 306DS-C: trolley and accessory bag
- High quality and hard wearing materials enables the user to easily transport their device
- Extra large wheels for ease of manoeuvrability including uneven surfaces
- Detachable accessory bag for storing patient consumables, spare batteries and power supply
- Battery charger now available

SPECIFICATIONS

Dimensions (H x W x D)

38.1 x 27.9 x 20.3 cm

Weight with/without battery

8.6 kg / 7.0 kg

Maximum Altitude

0 - 4000 m

Nominal Sound Level

40 dB(A) at 3.0 lpm in
PulseDose delivery mode

Oxygen Purity

91% ± 3%

Maximum Constant Flow

3 lpm

PulseDose Settings Available

1 / 1.5 / 2 / 2.5 / 3 / 4 / 5 / 6

Calculated Bolus Size

14 cc per l/min

Alarm Functions

Low oxygen, No flow,
No breath w/failsafe,
Low battery, No power,
Unit malfunction and
High temperature

Detachable accessory bag 306DS-655

Battery charger 306CH

AC 230V power adapter 306DS-651

12V DC adapter 306DS-652

Typical Battery Operation Times

Settings	Constant Flow	PulseDose (20 BPM)
1	4.0 hours	5.4 hours
2	2.4 hours	4.7 hours
3	1.6 hours	4.0 hours
4	—	3.5 hours
5	—	3.2 hours
6	—	3.0 hours
