

CLEARSCOPE

Smartphone Endoscope Adaptor

Capture. Manage. Share.

Developed by physicians for physicians

- ✓ **Portable:**
connects to the smartphone you already own
- ✓ **Compatible:**
works with any standard endoscope
- ✓ **Compliant:**
listed as a Class 1 medical device in Canada, USA & EU
- ✓ **Intelligent:**
sets up in seconds, easy to use, no training required
- ✓ **Cost effective:**
HD quality image and video capture at a fraction of the cost of traditional equipment

CLEARSCOPE is an endoscope video solution that connects any standard endoscope to the smartphone you already own. This innovative mobile medical technology creates a truly portable and cost effective alternative to the traditional video tower.

CLEARSCOPE makes it easy for medical professionals to securely capture, manage, and share HD quality video of endoscopic procedures.

No one can argue that access to video provides a valuable tool for diagnosing patients, teaching residents, and remotely consulting with other physicians. But traditional video capture equipment is expensive, not easily accessible, and can quickly become out dated. While mobile technology offers a portable, and cost effective alternative for endoscopy video capture, security of health information is a major concern. Until now.

Mobile Medical Camera App and Cloud Storage

Private. Secure. Compliant.

The app also helps to:

Secure photos & video:
Encryption and password protection lock images into a separate camera roll.

Cloud Backup:
Images saved to a HIPAA compliant backup service. Access from any browser via a web portal

Patient Consent:
Capture patient consent directly within the app as an added compliance measure

Share images:
Securely send images in app to colleagues, residents, even patients for teaching and consulting

MODICA offers enhanced camera settings like brightness, flash, zoom, focus and white balance to ensure the highest quality images. It then locks down medical photos and video in an encrypted, password-protected camera roll. Images can be annotated with data including patient name, dates, and notes for improved record management. MODICA even simplifies the process of gaining permission for how photographs are used with the in-app patient consent form.

Medical images are automatically moved off the smartphone and up to a secure, HIPAA compliant cloud service. This frees valuable storage space on the mobile device, and reduces the risk of data loss should the device be misplaced or stolen.

There is a MODICA solution for every type of user – from individual doctor, to small teams or clinics, even institution-wide deployments.
